

BDU-33 PRACTICE BOMB

Effective ordnance for precision simulations

AUSTRALIAN MUNITIONS PRACTICE BOMB PRODUCT RANGE CONSISTS OF THE FOLLOWING ITEMS;

Bomb practice BDU-33 C/B (Aust) 25 lb

Bomb practice 5 kg

Charge spotting bomb F2

Firing pin

BDU-33 PRACTICE BOMB

Effective ordnance for precision simulations

IN THE BATTLE SINCE 1888

Australian Munitions' BDU-33 practice bomb and F2 spotting charge conform to the safety and operations parameters of the Australian Defence Force (ADF) and are used to simulate MK 82 and MK 84 bombs in low drag configurations. The BDU-33 is manufactured at Australian Munitions' Benalla munitions facility.

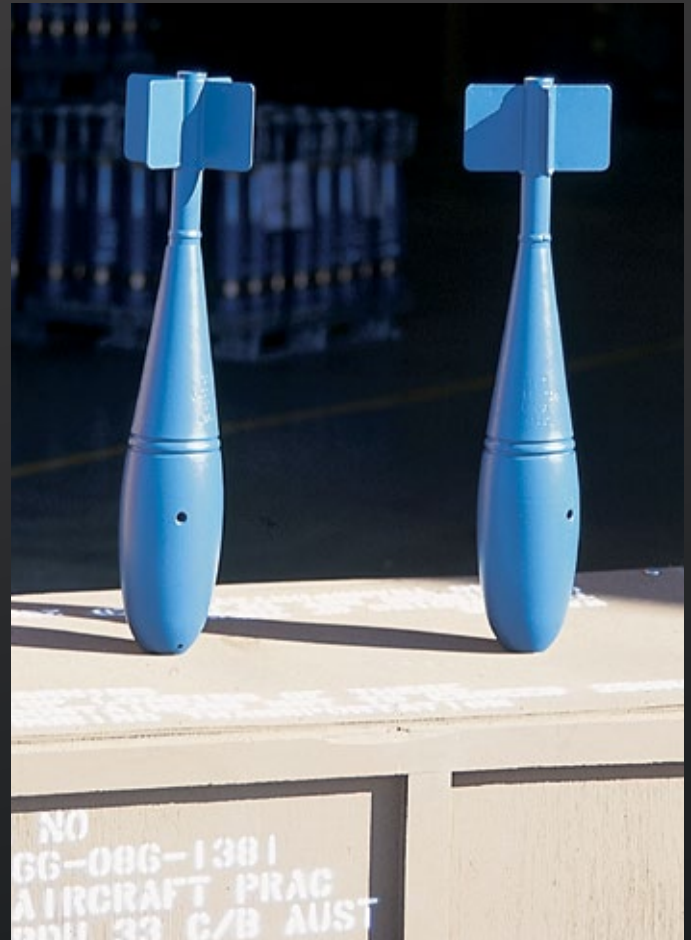

Australian Munitions' BDU-33 practice bombs can be loaded onto triple ejector racks and suspension units, and are easily transported to and from the aircraft on loading trailers.

SPECIAL FEATURES

Australian Munitions' BDU-33 practice bombs are 575 mm long and weigh 25-pounds. They accurately simulate larger and heavier live bombs by their tail fin guidance system. When loaded in place, underneath the aircraft initially, the BDU-33 bomb is pushed against a spring-loaded catch and locked into place. Australian Munitions' BDU-33 practice bombs can be unloaded from the aircraft by loosening the bolts and releasing the spring.

Australian Munitions' BDU-33 practice bombs also feature the F2 spotting charge. This unique spotting charge releases a distinct flash and white cloud on impact, allowing spotters to gauge the effectiveness of the bombing run in night or daylight training.

The spotting charges are designed to fit into the nose cone of the practice bomb and once the arming pin is released, will detonate on impact.

PACKAGING

Australian Munitions' BDU-33 practice bombs can be supplied in the following standard packaging configuration:

Re-usable containers—each container houses 45 units per container.

Details of packaging can be supplied upon request.

The Thales Australia Centre, WTC Northbank Wharf, Concourse Level,
Siddley Street, Melbourne, Victoria 3005, Australia.
